Project Summary

The samples listed on the following page(s) were received for analysis at Anatek Labs, Inc. The analytical report is attached. All test results reported below comply with and meet current TNI standards, other applicable regulatory standards, and the Anatek Labs, Inc. Quality Assurance Manual, unless otherwise noted in the report.

The results in this report relate only to the samples analyzed. All soil and solid results are reported on a dry-weight basis unless otherwise noted. An estimation of uncertainty is available upon request.

This report shall not be reproduced, except in full, without the written consent of Anatek Labs, Inc.

For questions about this report, please contact Justin Doty at 208-883-2839.

Comments:

The sludge sample reported in the following document was screened for 2-chloroethyl vinyl ether and acrolein using the known retention times and target ions associated with a calibration analyzed on the previous day for EPA 8260C. The two volatile organic compounds were not detected in this sample with an estimated detection limit < 0.05 mg/Kg.

Sample was prepped via standard EPA methods using either EPA 624 or 625 following all applicable QC protocols
The Top 10 TIC's (>90% Statistical match to reference spectra) are reported where applicable
Concentrations are estimated using the nearest internal standard and are order of magnitude estimates
If there were less than 10 TIC's detected, only those detected were reported.

Notes:

ND = Not detected above the listed practical quantitation limit (PQL) or not above the Method Detection Limit (MDL), if requested.
 PQL = Practical Quantitation Limit is the lowest level that can be achieved within specified limits of precision and accuracy during routine laboratory operating conditions.
 D.F. - Dilution Factor
